## WHY AN ULTIM ELITE?

*The very best trampoline*

Of all the trampolines, you can make the best jumps on the BERG Ultim Elite FlatGround. This trampoline has been specially designed for learning and performing the coolest and newest tricks. The trampoline is 5x3 metres, which means you have an enormous amount of jumping space! Just like the Olympic trampolines, this Ultim Elite is rectangular in shape. This means that you can make superfine jumps over the entire length and width of the trampoline. A rectangular trampoline also gives you more control over the jumps that you make.

The AirFlow jumping mat and the TwinSpring springs ensure that you can make extra high and supple jumps. The Ultim Elite has been designed with care, which has resulted in a very safe trampoline.

In this productsheet you can find information about:

- The rectangular shape
- The protective edge
- The jump mat
- The springs
- The frame

### Warranty

Frame: 13 year\*  
Protective edge: 5 year  
Jumping mat: 2 year  
Springs: 5 year

## 1. THE RECTANGULAR SHAPE

On a rectangular trampoline you can jump over the entire length. The jumps that you make on a rectangular trampoline are more controlled. That's why rectangular trampolines are used by top performers at the Olympic Games.

Perfect Jump Area TwinSpring Gold

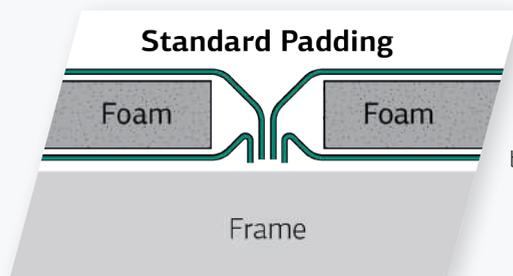

*Challenging for  
every jumper*

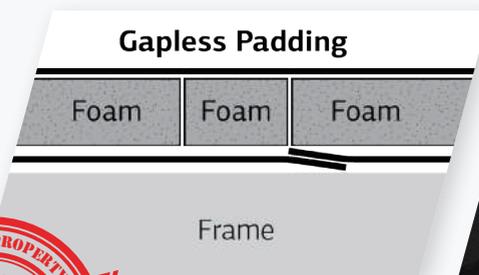

## 2. PVC PROTECTIVE EDGE

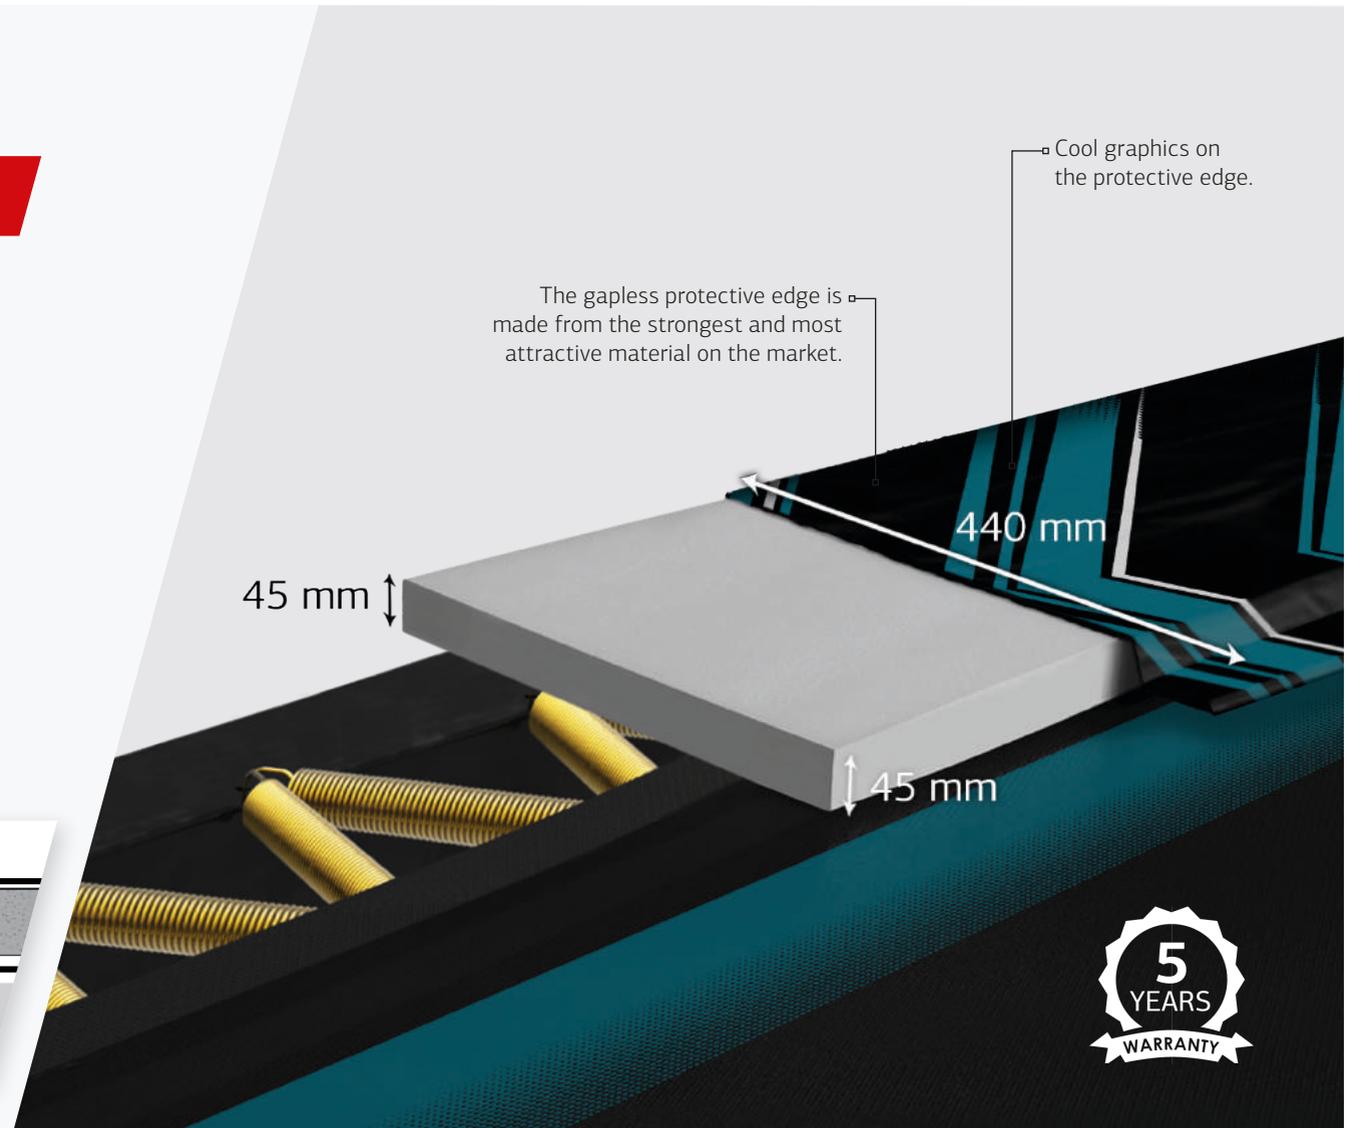

The Ultim Elite is one of a kind. Consisting of a patented gapless protective edge and finished with a cool graphic. Not only does it look cool, but due to gapless principle and the extra thick foam it is very safe as well.

A standard padding with gaps between the segments.

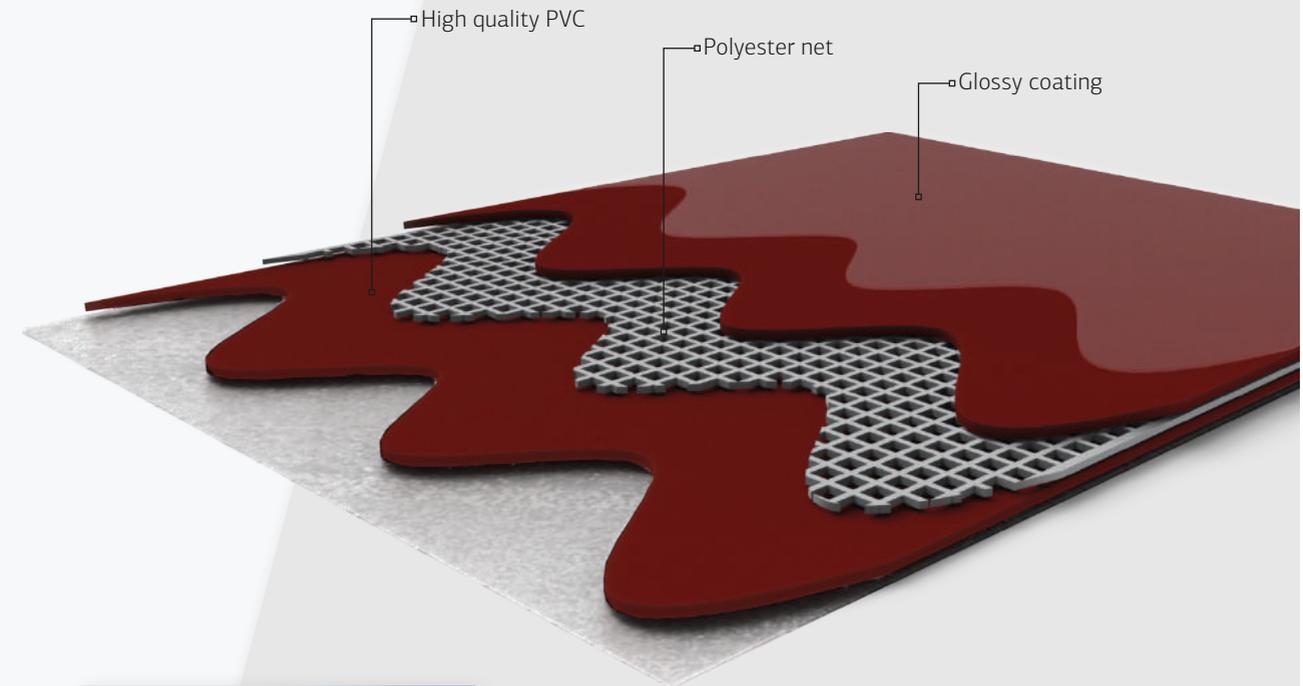

The gapless protective edge consists of continuous pieces of foam without any gaps. This ensures complete protection from the springs and the frame.

*Challenging for every jumper*

- The Elite padding has an extremely long lifespan which keeps its good looks 2-3 times longer than a Champion padding.
- The adhesion of the PVC material to the polyester mesh inside is up to 50% better than on the Champion padding. Because of this, the material is much less prone to delamination.
- The canvas is finished with a glossy coating to provide a luxurious appearance. The coating not only looks nice, but it has a purpose because of the UV-blockers it contains. The glossy surface finish reflects the light and UV instead of absorbing it, which makes the canvas better resistant to decoloration and degradation caused by the influence of UV light.
- The Elite padding fits super tight around the trampoline. This helps preventing wrinkles and always looks nice and tidy. The design of the padding has a much tighter fitting than the one on the Champion models. It takes almost twice as long as the Champion padding to sew the parts together to achieve the tight fitting. The tight fitting is achieved by first stitching the canvas segments together and then filling it with the foam parts by hand.
- The padding has an extra flange on the inner edge that is there to make sure the padding always lays flush with the jumping mat and to prevent gaps in between the jumping mat and the padding.

every **jumper**

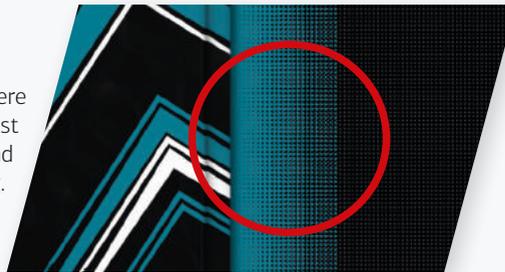

### 3. AIRFLOW

Higher jumps mean more fun. We have developed the AirFlow technique to enable you to make higher jumps. This jumping mat allows 50% more air permeation compared with a standard jumping mat. Good airflow ensures less resistance while jumping, which is why you can make higher jumps.

The jumping mat of the Ultim Elite has a large overlap over the springs. This ensures safety and prevents rattling of parts against the springs during jumping.

The blue marked edge is there to give a distinctive contrast between the jumping mat and the protective padding.

# AIRFLOW

The AirFlow product innovation is only available on the BERG Champion and BERG Elite lines.

50% more air permeation for better jumping comfort

**AIRFLOW**  
Higher & more flexible jumping

*Challenging for every jumper*

The FlatGround trampoline has a special noise-reducing strap underneath the protective edge. This prevents the protective edge from rattling against the jumping mat and enables you to make super quiet jumps.

Special padding band holders to keep tension on the band for this long rectangular padding.

every **jumper**

## 4. TWINSRING GOLD

The perfect jump area is that optimal part of the jump mat which results in the best jump experience. Jumping outside of this area results in a sense of feeling as if you are being pushed towards the inner part of the trampoline. Trampolines comprising of TwinSpring Gold Springs are mounted in the shape of a "V". This allows for a larger perfect jump area compared to trampolines that are sold with a conventional spring.

Another advantage? Due to the angled positioning of the TwinSpring Gold, the springs are longer in length without compromising the size of the jump mat. This results in a safer trampoline that optimizes jumping pleasure!

This extra wide spring eye with cross-stitched bands is especially resistant against twisting and turning and therefore has a long lifetime.

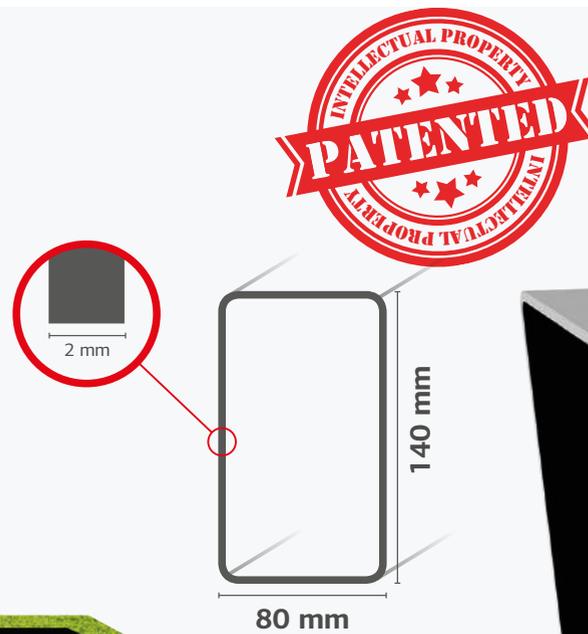

**Challenging** for  
every **jumper**

## 5. FRAME

The rectangular tubular frame is very strong (140 mm x 80 mm) and of high quality. As a result, the trampoline remains stationary and noiseless.

The patented frame is easy to assemble and install.

The frame blocks the sand from entering the pit.

Extremely heavy duty frame.

The frame segments are joined together by four bolts and nuts at each transition to ensure a solid and noiseless construction.

*Challenging for every jumper*

# AEROWALL

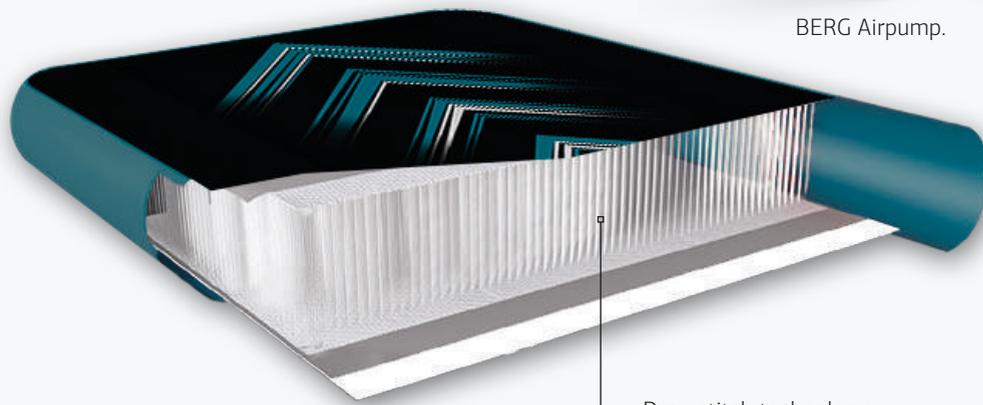

*The very best trampoline*

The unique AeroWall is designed for practising (extreme) tricks by professional jumpers. The material that is used has the unique drop stitch technology that causes the wall to be surprisingly sturdy.

The wall is inflated and then attached to a strong and solid frame. This makes the wall very sturdy and suitable for jumping against. The inflatable Wall can easily be installed and removed in less than a minute work. When the frame is removed as well, the openings for the frame can be closed with special designed foam caps.

BERG Airpump.

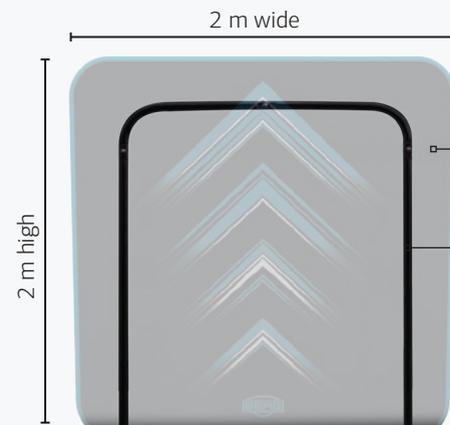

Drop stitch technology.

The persons shown in the image are trained athletes who practice trampolining as a sport.

Foam caps for when the AeroWall is not in use.

- AeroWall can be inflated in just several minutes!
- Strong and easy to remove frame.

# BERG ULTIM ELITE FLATGROUND

*The very best trampoline*

**BERG** FlatGround Trampoline ●

A FlatGround trampoline integrates seamlessly with your garden. This is because the protective edge of the trampoline is completely level with the garden. This makes the trampoline unobtrusive and very easy to step onto.
